

New PLA Hot Cups

Cups so good for the environment, they're 100% compostable*.

New PLA Hot Cups are like their hot-beverage counterparts, but with one important difference: they're made of 100% compostable material. Now you can use cups that take your image to a new level.

Stronger by nature

This is as good as hot cups get: rigid paperboard with a 100% compostable layer containing PLA (poly lactic acid), derived from natural plants like corn.

Taste what's hot

Coconut cappuccino? Vanilla soy latte? Green tea with a twist? Serve your signature beverages in a cup that helps the environment.

Beautiful stock design

Choose from the Viridian™ design or custom print with your own brand identity.

100% popular sizes

Choose from 8, 10, 12, 16 and 20 ounce completely compostable cups.

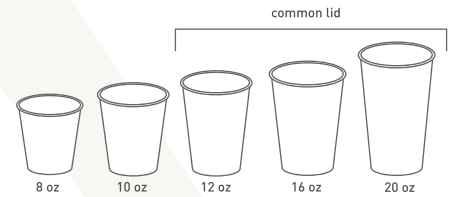

* This product is compostable in commercial composting facilities. These facilities may not exist in your area.
